Schema Status

The screenshot shows the Schema.org validator interface. On the left, there is a code editor displaying the HTML source code of the page. On the right, a 'Detected' panel shows the following results:

Schema Type	Errors	Warnings	Items
WebPage	0	0	1
WPHeader	0	0	1
hatom	0	0	1

Note:

We need to add the Local Business Schema & Service pages schema.

Indexed Pages Status

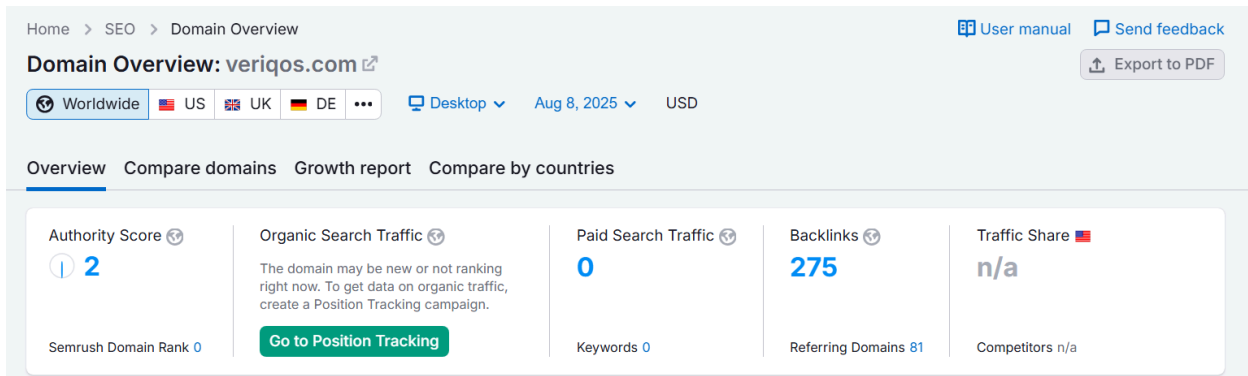

Only 8 Pages that are indexed

The screenshot shows a Google search for 'site:https://veriqos.com'. The search bar at the top contains the query and the search button. Below the search bar, there are navigation tabs for 'All', 'Images', 'Short videos', 'Videos', 'Forums', 'Web', 'News', and 'More'. A 'Tools' dropdown menu is also visible. The search results are displayed in a list format, with each result showing the domain 'veriqos.com', the URL, and a brief description. The results are as follows:

Backlinks & Authority Score

Recommendations:

- Optimize Largest Contentful Paint (LCP) and First Contentful Paint (FCP) by implementing caching, minifying CSS/JS, enabling lazy loading, and using a CDN like Cloudflare.
- Compress and convert all images to next-gen formats (WebP) to reduce load times significantly.
- Fix all duplicate and missing meta titles and descriptions, ensuring each page has a unique and keyword-optimized meta setup.
- Rewrite long meta titles to be within 60 characters and improve readability and CTR.
- Add missing H1 tags and ensure each page has only one H1. Use descriptive H1s with primary keywords.
- Add missing H2 tags and use them to structure content clearly while improving relevance for secondary keywords.
- Add ALT text to all images with relevant keywords to improve image SEO and accessibility.
- Interlink orphan pages (e.g., About Us, WealthTech Category) with relevant internal pages using keyword-rich anchor text.
- Remove unnecessary sitemaps from index (e.g., elementor-hf, breadcrumb, author, post_tag) to improve crawl efficiency.
- Improve robots.txt by disallowing non-SEO-friendly paths such as /tag/, /author/, and search parameters (/?s=).
- Submit the cleaned sitemap to Google Search Console and request indexing for key service pages and blogs.
- Create and implement structured data: Local Business schema for the homepage and Service schema for service pages using Rank Math or Schema Pro.

- Increase indexed content by adding keyword-rich, value-driven copy (1,000+ words) to core pages.
- Begin a blog content calendar with 2–4 posts monthly targeting long-tail keywords, customer pain points, and industry trends.
- Set up performance monitoring tools like Google Analytics 4, Google Search Console, and use tools like GTmetrix and PageSpeed Insights for ongoing performance checks.
- Secure the website with a WordPress security plugin (e.g., Wordfence) and enable daily backups.
- Configure essential SEO and performance plugins like Rank Math, WP Rocket, NitroPack, and Redirection.
- Optimize buttons, CTAs, and content for mobile-first indexing.
- Submitting the site to Google Business Profile, Bing Places, and relevant directories. (If not already registered)
- Start Link Building
